GOVERNMENT OF WESTERN AUSTRALIA

BUILDING FOR TOMORROW.

METRONET

METRONET ON SWAN MATILDA BAY FERRY TERMINAL 10 KEY FACTS

1. Western Australians will always be able to swim and paddle at Matilda Bay

The ferry will berth at least 80 metres from the foreshore, and ferry routes into and out of Matilda Bay will leave ample space for swimming, paddling and other foreshore-based activities.

2. Rowing and sailing activities will continue

Flexible ferry routes will be used to accommodate on-water activities, and the ferry master will always choose the safest route. 34 private moorings will be removed, creating 3.4 hectares of additional on-water space.

3. The new electric ferries have been designed to minimise wake

The ferries have been specially designed to generate as little wake as possible, helping minimise impacts on water users.

4. You will always be able to enjoy a picnic at Matilda Bay

The new jetty will occupy only a small section of the foreshore, representing less than one per cent of the length of the Matilda Bay shoreline.

5. The ferry will operate beyond existing moorings

A number of private moorings and vessels are already located closer to the foreshore than the proposed ferry berth, with boating activity continuing safely in the area.

6. Matilda Bay will remain a leafy Class A Reserve

Only three Plane trees, which do not provide habitat for Black Cockatoos, will be removed from the reserve. Nine trees will be planted to replace them.

7. New facilities will improve accessibility and convenience

A new building containing accessible toilets, bicycle shelter and charging infrastructure will be constructed within the existing car park area.

8. The terminal will provide better access to key destinations

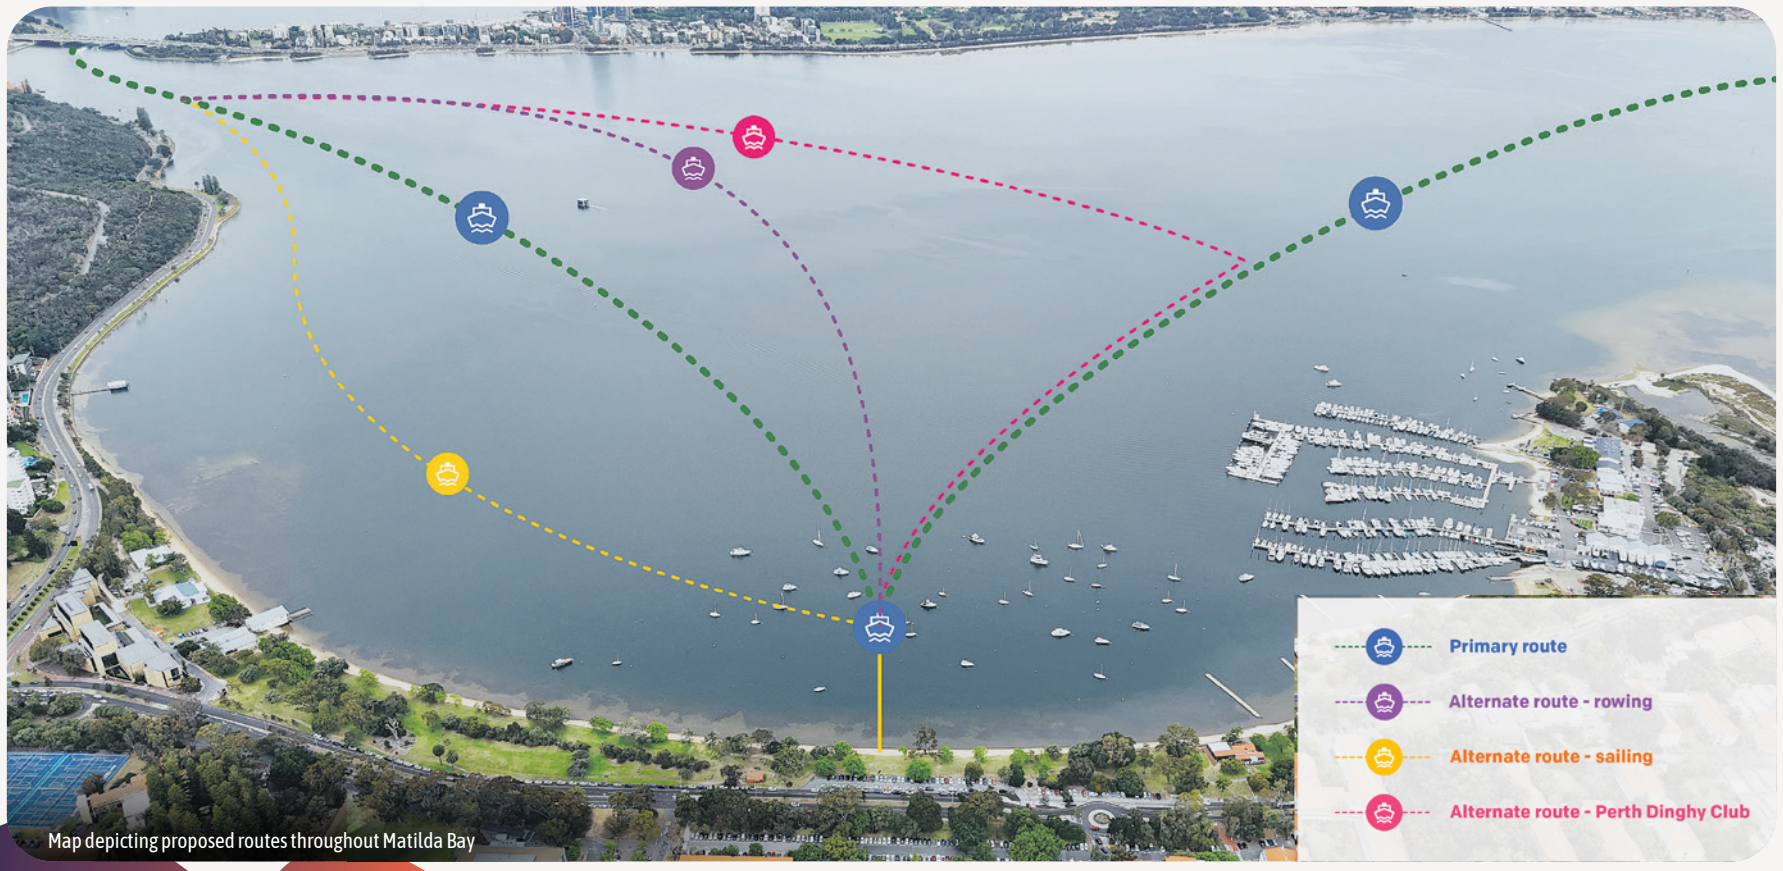

The Matilda Bay terminal will be located approximately 100 metres from the centre of The University of Western Australia, compared with around 1.2 kilometres from JoJo's. The terminal will connect with the Purple CAT and Transperth routes 96 and 97, providing access to QEII Medical Centre and Nedlands.

9. The Matilda Bay location is the most environmentally friendly

The jetty design avoids the need for dredging and minimises impacts on seagrass. By comparison, the JoJo's location would impact the nearby marine park, Bush Forever site and extensive seagrass habitat.

10. The project will support tourism and local businesses

The expanded ferry service will help share beautiful Matilda Bay with more Western Australians and visitors, attracting more people to the area and supporting the local economy.
